Warranty, Errors & Omissions

National Precision of Mechatronics, Corp. assumes no responsibility for errors or omissions in this catalog. National Precision reserves the right to change information or specifications without notice. Application and use of this product is the sole responsibility of the user, however our engineering personnel will advise you of guidelines for the proper parameters of use of the product. National Precision warrants the product to be free from defects in materials and workmanship only. Seller only obligation hereunder is to either repair or replace the defective product or work within 12 months of product delivery to our customers. No other warranties are expressed or implied in fact or by law. National Precision is not liable for associated costs of work done by the buyer involving our product, or altered product.

Type E suffix only denotes no lubrication groove or oil holes

All dimensions are metric

*Seals may reduce tilt angle

This table provides the numeric bore size conversion between manufacturers. To interchange other inch series, this table can be used in conjunction with the General Series Interchange table on page 1.

Please contact National Precision engineering personnel to discuss specifications, applications, loading, shaft or housing design, lubrication, installation or Load Series design types.

Load Series Bearings

Most Load Series spherical bearings are the single fracture type, though a few of the larger sizes require a double fracture. The fracture in the hardened steel outer race is to facilitate inner race or ball installation. Except for the very small sizes and self-lubricating types, most of the bearings have lubrication grooves and oil holes in the inner and outer races. The bearing races are made of heat treated and ground high strength steel. The races are phosphate treated and coated with Molybdenum Disulfide (MoS₂). The Molybdenum Disulfide coating is a dry film lubricant that protects the races from damage during initial movement, however most bearings should be lubricated with grease or oil prior to installation.

Load Series Self-Lubricating Bearings

Bearings of this type do not require grease or oil for lubrication. Instead, they utilize a PTFE liner system bonded to the inside diameter of the outer race as a lubricant. The inner race or ball is made of heat treated high strength steel which is chrome plated on the outside diameter. The chrome plating provides a smooth hard surface to run against the PTFE liner system. These bearings are also manufactured with seals to help keep contamination out of the bearing. This type of bearing is excellent in applications where the relative motion is between the outside diameter of the inner race or ball and the inside diameter of the outer race. These bearings are particularly well-suited when the loading is in one-direction. One-direction loading prevents grease or oil from flowing to the load zone of the bearing, while the Teflon® liner system provides uniform lubrication in the load zone. For more information on these types of bearings, please contact National Precision.

Tolerances

All tolerances in this catalog are measured before the outer races are fractured and before application of dry film lubricant.

Materials

Bearing races are made of GRC15/52100 steel and are heat treated for optimum wear resistance. The races are phosphate coated for corrosion protection and the sliding surfaces are MoS₂ coated. This does not apply to self-lubricating bearings.

Load Series

Operating Temperature Range

Unsealed -75 F to +400 F
Sealed -10 F to +250 F

Self-Lubricating

Sealed -10 F to +250 F

Ultimate Loads

Ultimate loads for the bearings in this catalog are approximately 1.5 times the catalog load ratings.

WHAT WE DO.

National Precision is a leading supplier of bearings, motion-related products, and engineered solutions for a wide range of markets, including medical, aerospace, and diversified industries. Known for our value-added solutions and technical expertise, National Precision is AS9100/ISO9001 certified, with ISO Class-6 clean room assembly and relubrication services that support the specialized needs of our customers. Since 1979, we have demonstrated our commitment to long-term relationships and the success of our customers, suppliers, and employees.

MECHATRONICS CORPORATION is a privately held marketing, distribution, and manufacturing company that was founded in 1979. Today, the corporation is comprised of five operating groups that serve diverse markets located in Preston, WA.

NATIONAL PRECISION

Bearing and Motion Solutions

National Precision distributes bearings to the Aerospace, Medical, Defense, and Industrial markets.

www.nationalprecision.com
Tel: 800-426-8038

MECHATRONICS FAN GROUP

Mechatronics Fan Group manufactures AC, DC & EC cooling fans, blowers and accessories for the Electronic, Food Handling, Medical and HVAC industries.

www.mechatronics.com
Tel: 800-453-4569

SILVERTHIN

Thin, Slewing & Custom Bearing Mfg

Silverthin manufactures thin section ball bearings, slewing ring bearings and custom bearings for Industrial and Defense applications.

www.silverthin.com
Tel: 866-294-5841

MECHCONNECT

Custom Harness & Cable Assembly

MechConnect manufactures cable assemblies, complex wire harnesses, and box builds for Aerospace, Medical, Industrial, Electronic, and Food Service industries.

www.mechconnect.com
Tel: 425-441-1237

K&E AERO TOOLS

Bearing Installation, Test & Removal

K&E AERO TOOLS is a USA manufacturer of bearing installation/removal tools, proof load testing and go kits for the Aerospace market.

www.kandetools.com
Tel: 800-426-8038
